## Agric Scope Grade 11 2014:

Evolution of Antimicrobial Peptides Piyush Bairdara, Santi Mohan Mandal, 2024-11-21 Over the last century antibiotics have been a primary treatment for infectious diseases and indiscriminate use by both healthcare providers and patients has led to the rapid emergence of resistant pathogens. Multidrug resistant pathogens and infective agents are an urgent threat to global health and this issue has created a critical need for the investigation of alternatives to conventional antibiotics. Antimicrobial peptides (AMPs) have emerged as promising alternative therapeutics with studies on their mechanisms and applications an area of intense interest in agricultural science, physiology, and medicine. AMPs are naturally occurring components of the host defense system and functional throughout all orders of life from prokaryotes to eukaryotes. They are potent molecules with broad spectrum activities against infectious agents including bacteria, fungi, viruses, and parasites. AMPs have demonstrated therapeutic potential against non-infectious diseases like chronic inflammation and cancer and have been found to have potential activities against slow-growing bacteria such as biofilms. This book summarizes the current available research on AMPs including discovery, screening, and characterization for therapeutic applications. It discusses molecular biology, proteomics, genomics, and bioinformatics approaches. In addition, it covers AMP classification and evolutionary studies from prokaryotes to eukaryotes.

## **Camelid Farming, Production, Reproduction, Health, and Welfare**

Barbara Padalino, Carlos Iglesias Pastrana, Laura Menchetti, Asim Faraz, 2025-10-09 Camelid population is growing and 2024 is the Year of the Camelids. There has been an increase in camelid related scientific output in the last few decades covering all aspects from farming to reproduction technologies and from internal medicine to welfare. Camelids are multi-purpose animals being kept not only for milk, meat, and wool production but also for working, riding, beauty contests, and racing. The growing needs and rising awareness about camels have changed the notion of them being just ships of the desert to being recognized as food security animals in many arid and semi-arid areas of the world. Camels play a prominent role in pastoral economies globally and are predicted to meet the milk and meat demands of pastoral communities in particular. Consequently, camels have been described as the livestock of the future. However, New World Camelids, namely llamas and alpacas, have also gained increasing popularity resulting in a greater demand for veterinary care for llamas and alpacas worldwide. Our current knowledge of camelid behavior, physiology, health, and welfare is still limited and camelid farming practices are often based on traditions and beliefs. Therefore, there is a pressing need for more evidence to implement regulations that can protect camelid health and welfare while also enhancing their productivity. We welcome articles addressing but not limited to the following themes: Advances in camelid reproductive technologies, Innovations in camelid health and internal medicine, Current trends in camelid welfare practices, Impact of camelid farming on pastoral economies, Role of camelids in food security and sustainability in arid regions, Comparative studies between Old World and New World camelids.
