pathogens rust fungi display the most complex lifecycles for with up to five different spore forms and for many rust fungi alternate hosts on which sexual and clonal reproduction are achieved The genomics revolution and particularly the application of new generation sequencing technologies have greatly changed the way we now address biological studies and has in particular accelerated and made feasible molecular studies on non model species such as rust fungi The goal of this research topic is to gather articles that present recent advances in the understanding of rust fungus biology their complex lifecycles and obligate biotrophic interactions with their hosts through the means of genomics This includes genome sequencing and or resequencing of isolates RNA Seq or large scale transcriptome analyses genome scale detailed annotation of gene families conformation of genes and or expression of gene complements via proteomics and comparative analyses among the various rust fungi and where feasible with other obligate biotrophs or fungi displaying distinct trophic modes This Research Topic provides a great opportunity to provide an up to date account of rust fungus biology through the lens of genomics including state of the art technologies developed to achieve this knowledge
