The Philosophy of Mathematics Education Paul Ernest,Ole Skovsmose,Jean Paul van Bendegem,Maria Bicudo,Roger Miarka,Ladislav Kvasz,Regina Moeller,2016-07-15 This survey provides a brief and selective overview of research in the philosophy of mathematics education It asks what makes up the philosophy of mathematics education what it means what questions it asks and answers and what is its overall importance and use It provides overviews of critical mathematics education and the most relevant modern movements in the philosophy of mathematics A case study is provided of an emerging research tradition in one country This is the Hermeneutic strand of research in the philosophy of mathematics education in Brazil This illustrates one orientation towards research inquiry in the philosophy of mathematics education It is part of a broader practice of philosophical archaeology the uncovering of hidden assumptions and buried ideologies within the concepts and methods of research and practice in mathematics education An extensive bibliography is also included

Evolutionary Political Economy in Action Hardy Hanappi,Savvas Katsikides,Manuel Scholz-Wäckerle,2017-01-06 The world is in turmoil the dynamics of political economy seem to have entered a phase where a return to normal cannot be expected Since the financial crisis conventional economic theory has proven itself to be rather helpless and political decision makers have become suspicious about this type of economic consultancy This book offers a different approach It promises to describe political and economic dynamics as interwoven as they are in real life and it adds to that an evolutionary perspective The latter allows for a long run view which makes it possible to discuss the emergence and exit of social institutions Evolutionary Political Economy in Action consists of two parts Part I provides a broad range of issues that show how flexible evolutionary political economy can handle acute policy problems in Europe should Europe support the revived build up of NATO forces on its Eastern border or should it rather aim at economic cooperation with Russia How can democracy for a whole continent be reasonably further developed what is the role of economies of scope Do the new protest movements against inequality provide alternatives What could a vision for a unified socioecological Europe look like Part II takes a closer look at Cyprus and Greece where the problems of the financial crisis have been exacerbated by the solutions imposed on them by the troika In all of these essays the authors demonstrate the unique insights which can be garnered from adopting an evolutionary political economy approach and consider the real solutions that such an approach points towards This volume is extremely useful for social scientists in the fields of economics politics and sociology who are interested to learn what evolutionary political economy is how it proceeds and what it can provide [Abstract Mathematical Cognition](#) Wolfgang Grodd,Philippe Chassy,2016-08-09 Despite the importance of mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated view of abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the

fact that numerical cognition stems from spatial cognition. The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus. Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus. Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage where we seek to understand how these basic skills are used to support the acquisition and use of abstract mathematical concepts. *What levels of explanation in the behavioural sciences?* Giuseppe Boccignone, Roberto Cordeschi, 2015-07-03. Complex systems are to be seen as typically having multiple levels of organization. For instance in the behavioural and cognitive sciences there has been a long lasting trend promoted by the seminal work of David Marr putting focus on three distinct levels of analysis the computational level accounting for the What and Why issues the algorithmic and the implementational levels specifying the How problem. However the tremendous developments in neuroscience knowledge about processes at different scales of organization together with the complexity of today cognitive theories suggest that there will hardly be only three levels of explanation. Instead there will be many different degrees of commitments corresponding to the different granularities from high level behavioural models to low level neural and molecular models of the cognitive research program. For instance Bayesian approaches that are usually advocated for formalizing Marr's computational level and rational behaviour have even been adopted to model synaptic plasticity and axon guidance by molecular gradients. As a result we can consider the behavioural scientist as dealing with models at a multiplicity of levels. The purpose of this Research Topic in *Frontiers in Theoretical and Philosophical Psychology* is to promote an approach to the role of the levels and explanation and models which is of interest for cognitive scientists, neuroscientists, psychologists, behavioural scientists and philosophers of science.

Spaces Mapped and Monstrous Nick Jones, 2020-04-21. Digital 3D has become a core feature of the twenty first century visual landscape. Yet 3D cinema is a contradictory media form producing spaces that are highly regimented and exhaustively detailed, it simultaneously relies upon distortions of vision and space that are inherently strange. *Spaces Mapped and Monstrous* explores the paradoxical nature of 3D cinema to offer a critical analysis of an inescapable part of contemporary culture. Considering 3D's distinctive visual qualities and its connections to wider digital systems, Nick Jones situates the production and exhibition of 3D cinema within a web of aesthetic, technological and historical contexts. He examines 3D's relationship with computer interfaces, virtual reality and digital networks as well as tracing its lineage to predigital models of visual organization. Jones emphasizes that 3D is not only a technology used in films but also a tool for producing, controlling and distorting space within systems of surveillance, corporatization and militarization. The book features detailed analysis of a wide range of films including *Avatar* (2009), *Goodbye to Language* (2014), *Love* (2015) and *Clash of the Titans* (2010) demonstrating that 3D is not merely an augmentation of 2D cinema but that it has its own unique properties. *Spaces Mapped and Monstrous* brings together media

archaeology digital theory and textual analysis to provide a new account of the importance of 3D to visual culture today

Academic Languaging Gisela Ernst-Slavit, Margo Gottlieb, 2025-06-20 Rethink how academic languaging can transform content area teaching. Gisela Ernst Slavit and Margo Gottlieb address these challenges by embracing academic languaging an active collaborative student driven process. Academic Languaging offers strategies to integrate language and content learning while fostering student engagement, voice and agency. Dedicated chapters on academic languaging for Language Arts, Mathematics, Social Studies and Science highlight the dimensions of disciplinary language for each subject and provide strategies for moving learning forward with multilingual learners.
