The Combination of Data-Driven Machine Learning Approaches and Prior Knowledge for Robust Medical Image Processing and Analysis Jinming Duan, Chen Qin, Gongning Luo , Diwei Zhou, 2024-06-11 With the availability of big image datasets and state of the art computing hardware data driven machine learning approaches particularly deep learning have been used in numerous medical image CT scans MRI PET SPECT etc computing tasks ranging from image reconstruction super resolution segmentation registration all the way to disease classification and survival prediction. However training such high precision approaches often require large amounts of data to be collected and labelled and high capacity graphics processing units GPUs installed which are resource intensive and hence not always practical. Other hurdles such as the generalization ability to unseen new data and difficulty to interpret and explain can prevent their deployment to those clinical applications which deem such abilities imperative. **Research** United States.
