Subject Guide to Books in Print ,2001

**Urban Deer Havens** Clark E. Adams,Cassandra LaFleur Villarreal,2020-05-06

Urban Deer Havens consists of a thorough examination of selected cervid deer species that are known to inhabit urban communities in the United States. The deer species that are included in this presentation consisted of white tailed Odocoileus virginianus, Key deer O. v. clavium, moose Alces alces, elk Cervus elaphus, mule Odocoileus hemionus and black tailed deer O. h. columbianus. This book is the first attempt to examine the similarities and differences in those factors that allow the selected cervids to exist and thrive in urban habitats. This information has never been collected, collated, reviewed and published under one cover document. Yet all five are known to inhabit urban communities within their geographic range. The lack of information concerning several important examples of urban cervids in conjunction with a proliferation of information on white tailed deer only is an incomplete and biased presentation. This book is the first comprehensive source of information on urban deer management which includes a broad assemblage of urban cervids. The overall objective of this book is to provide a more holistic examination of urban cervids. For example, it examines the similarities and differences of the environmental impacts, management strategies and human dimensions considerations concerning urban cervids in general and using specific examples. Urban Deer Havens features four chapters that include Urban deer census techniques and population dynamics. Comprehensive tables that review urban community deer management plans, National and state wide estimates, the five selected cervids, Laws and regulations concerning urban deer, Lethal and nonlethal management options for managing deer, Steps for managing urban deer populations, Examples of urban deer management efforts.

### **Ecological Forest Management**

Jerry F. Franklin, K. Norman Johnson, Debora L. Johnson, 2018-03-19. Fundamental changes have occurred in all aspects of forestry over the last 50 years including the underlying science, societal expectations of forests and their management and the evolution of a globalized economy. This textbook is an effort to comprehensively integrate this new knowledge of forest ecosystems and human concerns and needs into a management philosophy that is applicable to the vast majority of global forest lands. Ecological forest management (EFM) is focused on policies and practices that maintain the integrity of forest ecosystems while achieving environmental, economic and cultural goals of human societies. EFM uses natural ecological models as its basis, contrasting it with modern production forestry which is based on agronomic models and constrained by required return on investment. Sections of the book consider 1. Basic concepts related to forest ecosystems and silviculture based on natural models, 2. Social and political foundations of forestry including law, economics and social acceptability, 3. Important current topics including wildfire, biological diversity and climate change, and 4. Forest planning in an uncertain world from small privately owned lands to large public ownerships. The book concludes with an overview of how EFM can contribute to resolving major 21st century issues in forestry including sustaining forest dependent societies.
