Earthquake Analysis and Design of Industrial Structures and Infra-structures Indrajit Chowdhury, Shambhu P. Dasgupta, 2018-10-06 Despite significant development in earthquake analysis and design in the last 50 years or more different structures related to industry infra structure and human habitats get destroyed with monotonic regularity under strong motion earthquake Even the recent earthquake in Mexico in September 2017 killed a number of people and destroyed national assets amounting to hundreds of millions of dollars Careful evaluation of the technology reveals that despite significant development in earthquake engineering most of the books that are available on the market for reference are primarily focused towards buildings and framed type structures It is accepted that during an earthquake it is buildings that get destroyed most and has been the biggest killers of human life Yet there are a number of structures like retaining walls water tanks Bunkers silos tall chimneys bridge piers etc that are equally susceptible to earthquake and if damaged can cause serious trouble and great economic distress Unfortunately many of these systems are analyzed by techniques that are too simplified unrealistic obsolete or nothing is done about them ignoring completely the seismic effects as no guidelines exist for their analysis design like seismic analysis of counterfort retaining walls or dynamic pressures on bunker walls etc This highly informative book addresses many of these items for which there exists a significant gap in technology and yet remain an important life line of considerable commercial significance The book is an outcome of authors academic research and practice across the four continents USA Europe Africa and Asia in the last thirty two years where many of these technologies have been put in practice that got tested against real time earthquakes All methods presented herein have been published previously in peer reviewed research journals and international conferences of repute before being put to practice Professionals working in international EPC and consulting engineering firms graduates taking advanced courses in earthquake engineering doctoral scholars pursuing research in earthquake engineering in the area of dynamic soil structure interaction DSSI and advanced under graduates wanting to self learn and update themselves on earthquake analysis and design are greatly benefited from this book
