association between a single nucleotide polymorphism SNP and the expression of a gene Recently the association between omics data and more complex data like pathological and clinical imaging data has been a hot research topic The outcomes may reveal the underlying molecular mechanism and promote de novo drug design as well as drug repurposing for ARNDs Here we welcome investigators to share their Original Research Review Mini Review Hypothesis and Theory Perspective Conceptual Analysis Data Report Brief Research Report Code related to multi omics studies of ARNDs which can be applied for better diagnosis treatment prognosis and drug discovery of human diseases in the future era of precision medicine Potential contents include but are not limited to the following Methods for integrating interpreting or visualizing two or more omics data Methods for identifying interactions between different data modalities Methods for disease subtyping biomarker prediction Machine learning or deep learning methods on dimensional reduction and feature selection for big noisy data Methods for studying the association among different omics data or between omics and non omics data like clinical pathological and imaging data Review of multi omics resource about ARNDs and or CNS aging Experimental validation of biomarkers identified from multi omics data analysis Disease diagnosis and prognosis prediction from imaging and non imaging data analysis or both Clinical applications or validations of findings from multi omics data analysis Economic and Social Survey, Jamaica ,2013
