**Solvency II. A comparison of the standard model with internal models to calculate**

**the Solvency Capital Requirements (SCR)** Shahrok Shedari,2016-09-14 Master s Thesis from the year 2015 in the subject Business economics Banking Stock Exchanges Insurance Accounting grade University of Frankfurt Main language English abstract The Solvency II Directive which will come into effect from January 2016 is a very important project of the European insurance industry It will set new rules to the European insurance business Because of being the biggest insurance market of the world European insurers generate more than 1 100 bn p a and invest around 8 600 bn in the economy the new directive will also act as a signal for the worldwide regulation of insurance companies So it is also intended to have a framework which is in line with the international developments in solvency risk management supervisory and accounting After 15 years of planning and development the regulation is now implemented step by step The aim of the EU Solvency II Directive is to prevent insurers from becoming insolvent For this purpose among other things a uniform capital adequacy for all European insurance companies is provided Core of the proposed amendments with respect to the investment is that eligible capital at any time must be higher than the calculated risk One of the main parts of the Solvency II project is the determination of the capital requirements The idea is to assess both the assets and the liabilities with the aim of a more realistic modelling and assessments of the risk to which an insurer may be exposed to The solvency capital requirements SCR for an one year horizon is then calculated on the 99 5% Value at Risk The determined SCR answers the question how much capital is required today to cover losses which may occur during the next 12 months with a probability of 99 5% For the calculation of the SCR the insurer can choose between standard model internal models or a hybrid model Since internal models allow a better assessment of the companies risk than the standard model insurers are encouraged to implement such stochastic internal models But the implementation of internal model is as well costly as sophisticated That is why the European Commission with support of the Committee of Insurance and Occupational Pension Supervisors CEIOPS has established a scenario based standard model The standard model defines in a first step different sub modules e g market risk operational risk for which the capital requirements are calculated The different SCR s are then aggregated under the assumption of a multivariate normal distribution with prespecified correlation matrices to allow for diversification effects

**Solvency II** Great Britain. Parliament. House of Lords. European Union Committee,2008 *Capital Requirements, Disclosure, and Supervision in the European Insurance Industry* M. Starita,I. Malafronte,2015-12-17 Capital Requirements Disclosure and Supervision in the European Insurance Industry provides an in depth analysis of Solvency II s issues by combining both a theoretical approach and evidence of the empirical implications and effects on the European insurance industry

**Internal Models and Solvency Two** Paolo Cadoni,2014 Under the Solvency II directive insurance companies are required to calculate their Solvency Capital Requirement SCR in order to prove to supervisors policyholders and beneficiaries that they have a high enough level of funds to absorb significant losses and to make payments as they fall due They have a choice between a standard formula and an internal model in calculating their SCR Many companies favour internal models as they

are more risk sensitive capture individual risk profiles and therefore reduce the capital requirements placed on insurance companies by Solvency II. However, internal models are subject to approval by supervisory bodies. Insurance companies need to demonstrate that their internal model meets the use test, statistical quality standards, calibration standards, validation standards and documentation standards. Internal Models and Solvency II clarifies the requirements for practitioners and senior executives by providing regulatory and practical insight into internal models. Perspectives from both the supervisory and industry side gives unique insight into the spirit and rationale of the requirements and are complemented by practical solutions to the daily challenges faced when reviewing and implementing internal models. Edited by Paolo Cadoni, currently Technical Head of the Insurance Policy Department at the Prudential Regulation Authority, this book provides support and solutions for the managers charged with implementing and validating their companies' internal models, helping readers to ensure the compliance of their models. Insurance supervisors will also be able to use this book to clarify the requirements when reviewing internal model applications. Internal Models and Solvency II gives readers a wider understanding of the history, challenges, philosophy and future prospects of Solvency II internal models.

*Solvency Requirements for EU Insurers*  
Karel Van Hulle, 2019

Solvency II is the new regime that regulates the solvency requirements for EU insurers and reinsurers. Solvency II aims to reduce the risk that an insurer would be unable to meet claims, to provide early warning to supervisors so that they can intervene promptly if capital falls below the required level and to promote confidence in the financial stability of the insurance sector. Solvency II not only sets out the minimum capital requirements to guarantee policyholder protection but also includes measures to stimulate risk management and good governance and to improve transparency. While the Solvency I regime only sets basic solvency standards, Solvency II has a much wider scope. Solvency II aims to unify the regulation of the European insurance market as well as to increase policyholder protection. Because it improves the protection of policyholders, creates an incentive for good risk management, recognizes the economic reality of a group, establishes market transparency and provides for a modern risk-based supervisory regime, the book's subtitle is *Solvency II is Good for You*. This book provides a thorough and well-structured overview of the new regulatory regime and how it will affect insurers, reinsurers and other market participants including policyholders. The author, who was closely involved in the making of Solvency II, offers all the necessary insights and explanations to better understand this new regulation. The book is written for a wide audience, from the non-expert who wants to gain some or more insight in the complex world of insurance and Solvency II to the specialist who will find this book a very interesting and helpful reference work.
