The ARM Cortex M4 is one of the most powerful microcontrollers on the market and includes a floating point unit FPU which enables it to address applications. The ARM Cortex M4 Microcontroller Cookbook provides a practical introduction to programming an embedded microcontroller architecture. This book attempts to address this through a series of recipes that develop embedded applications targeting the ARM Cortex M4 device family. The recipes in this book have all been tested using the Keil MCBSTM32F400 board. This board includes a small graphic LCD touchscreen 320x240 pixels that can be used to create a variety of 2D gaming applications. These motivate a younger audience and are used throughout the book to illustrate particular hardware peripherals and software concepts. C language is used predominantly throughout but one chapter is devoted to recipes involving assembly language. Programs are mostly written using ARM's free microcontroller development kit MDK but for those looking for open source development environments the book also shows how to configure the ARM GNU toolchain. Some of the recipes described in the book are the basis for laboratories and assignments undertaken by undergraduates.

Style and approach The ARM Cortex M4 Cookbook is a practical guide full of hands on recipes. It follows a step by step approach that allows you to find, utilize and learn ARM concepts quickly.
