work traces the evolution of this technology from Robert Goddard's research in the 1920s through the development of the Titan missiles and launch vehicles in the 1960s to the refinement of the space shuttle in the 1980s. With the first book devoted primarily to military hardware and the second to launch vehicle hardware, Hunley offers a sweeping overview of these impressive engineering innovations as well as insights into the dynamic personalities responsible for them. Together the two volumes offer a unique invaluable history of rocketry that should appeal to a wide range of scholars and space buffs.

Encyclopedia of Space Science and Technology, 2 Volume Set Hans Mark, 2003. The online edition of the Encyclopedia of Space Science and Technology representing an ambitious collection of the underlying physical principles of rockets, satellites and space stations. This state-of-the-art reference outlines what astronomers know about the sun, planets, galaxy and universe as well as the effect of the space environment on human and other biological systems. The Encyclopedia also provides an in-depth summary of the engineering involved in launching a rocket or satellite and the control systems involved on the ground, in orbit or in deep space. Manufacturing in space from planetary and other resources is also discussed. **Moonrush** Dennis Wingo, 2004. If by some magic process humanity was able to go to the stars tomorrow and find habitable worlds, we would probably want to design a society based upon modern technology. We can't do this, but we can look at our Earthbound society and think about how to redesign it so that it will work better. It is like a giant game of the SIMS but in the real world. This book examines how the exploration of space, specifically a commercial base on the Moon and Mars, would transform our economies on the Earth as surely as the discovery of the New World transformed the old world of Europe. From Platinum Group Metals for fuel cells, manufacturing high-tech metals and robots to the building of a fusion reactor, the Moon holds great promise for a high-tech manufacturing future. This book takes a look and imagines how a world with such resources could be designed for our future. Microgravity Experiments Safety and Integration Requirements Document Tree, 1995.
