Study Guide and Workbook, an Interactive Approach for Starr and McMillan's Human Biology, Third Edition

Jane B. Taylor, John D. Jackson, 1999 Asks the student to write all answers in this study guide workbook. This workbook is interactive because it requires students to do things instead of just reading more material. All questions are arranged by chapter modules so students may skip unassigned material. Each module in the study guide refers to the page numbers of the corresponding module in the text. There is a wide variety of questions: multiple choice, questions, tables to be filled in, art to be labeled, true/false questions requiring students to write the correct answer if the statement is false, thought provoking conceptual questions, boldfaced terms requiring a written definition, list of objectives in fill-in-the-blank format, and other types of questions.

Highway Noise; a Design Guide for Highway Engineers Bolt, Beranek, and Newman, Bolt, Beranek, and Newman, Inc., 1971 Various methods of assessing noise, loudness, and noise annoyance are reviewed and explained. Sources, types, and intensities of traffic noise are noted. Typical means of abatement and attenuation are described. Design criteria for various land uses, ranging from low density to industrial, are suggested and compared with the results of previous BBN and British systems for predicting annoyance and complaint. A design guide for predicting traffic noise capable of being programmed for batch and on-line computer applications is presented in a form suitable for use as a working tool. A flow diagram describes the interrelationships of elements in the traffic noise prediction methodology and each element is discussed in detail in the text. The text is presented in a tape recording that takes the listener through a series of traffic situations with such variables as traffic, distance, flow, velocity, distance, outdoors, and indoors, and presence or absence of absorbers and attenuators.
