

ALL ABOUT TREES

SOME TREES CAN GROW BIGGER THAN ANY OTHER PLANT AND LIVE LONGER THAN ANY ANIMAL ON EARTH. They provide food and shelter for thousands of living things. Their roots extend deep underground and hold the soil in place. Their leaves release oxygen for us to breathe. Without trees, life on our planet would find it hard to survive.

THERE ARE TWO MAIN TYPES OF TREE: **evergreen** and **deciduous**. Deciduous trees shed their leaves before the cold or dry season and grow new foliage in the spring. Evergreen trees keep their leaves year-round.

TREE SHAPES

Trees come in many shapes and sizes, from small round shrubs to towering rain forest giants. They can be shaped by the wind as by the proximity of other trees, bending to survive against gusts and gales or growing and thin to reach the light in a crowded forest.

TREE RINGS

Cut a slice through a tree trunk, and you can read the story of its life. The number of rings shows how old the tree is. Narrow rings show poor growing conditions such as droughts or overcrowding. Wide rings record good growth years. Trees form new wood in the spring and summer.

PARTS OF A TREE

A. Crown—The leaves and branches at the top of the tree. Each year, the tree increases in size by adding new twigs.

B. Trunk/stem—The trunk supports the crown and gives

the tree its shape and strength. Sapwood (xylem) inside the trunk contains a network of tubes that runs between the roots and the leaves to provide water and nutrients from the soil.

C. Bark—The outer bark protects the tree from extreme temperatures, insect damage, and disease; the inner bark (phloem) carries sugar and nutrients (sap) from the leaves to the rest

of the tree. Bark can be smooth or rough. The bark of many trees changes color and thickens as the tree ages.

D. Cambium—This forms new wood and produces growth rings.

E. Roots—The roots of a tree spread far and wide beyond its trunk through the surrounding soil. They absorb water and nutrients from the earth, store sugar, and anchor the tree in the ground.

F. Leaves—The leaves are every tree's main food factory. Through a process known as photosynthesis, they convert energy and chemicals taken from the sunlight, air, and water and convert it into food.
