

## CH. 12 HW

4, 12, 14, 16, & 20

4. In one sentence explain the main reason we should not run multiple t tests when we have more than two groups.

Running multiple t tests with 2 groups will take a lot of work and can easily result in a Type I error as the alpha value will be increased and obtaining a significance will be way more likely.

12. What is the total of the ANOVA split into?

The between the groups variability and within the groups variability.

14. In sentence format state the null and alternative hypotheses for a high school counselor who is testing three different therapies (group, individual, guided self-help) to freshmen and measuring number of stress related words on a survey.

Null: There is no significant difference in the number of stress-related words on the survey among the three different groups.

Alt.: There is a significant difference in the number of stress-related words on the survey among the three different groups.

16. What is a post hoc test and why don't you need it if your ANOVA is not significant?

A test to reveal where the difference or significance lies between the groups. If there is no significance the test won't reveal anything.

20. A video game developer is testing a new game on three different groups. Each group represents a different target market for the game. The developer collects scores from a random sample from each group. Show all work to receive credit. Include a table of your results.
