Moving the Needle on Children's Physical Activity - How to Best Promote More Movement? Mirko Brandes, Jennifer Sacheck, 2024-07-24 Globally physical inactivity is on the rise in most countries and according to the WHO it is considered one of the leading major public health risks As children's physical activity behaviors are conveyed into adulthood many interventions focus on establishing healthy physical activity habits in children to prevent the potential negative health outcomes associated with low physical activity over the life course The school environment provides an opportunity to reach the majority of children however physical activity promotion in schools can often be a challenge Barriers to the success of physical activity interventions include the physical social and economic environment competencies and workload of teachers as well as the perception that physical activity may interfere with the primary task of
