

Introduction to Cells

READING COMPREHENSION

PROKARYOTIC CELLS

Prokaryotic cells are the simplest type of cell. They lack a nucleus and other membrane-bound organelles. They are found in all three domains of life: Bacteria, Eukarya, and Eukarya. Prokaryotic cells are typically smaller than eukaryotic cells, ranging from 0.5 to 5.0 micrometers in diameter. They have a cell wall that provides structural support and protection. The cell wall is made of peptidoglycan in bacteria and of other materials in archaea. The cell membrane is a phospholipid bilayer that separates the cell from its environment. Inside the cell, the DNA is located in a region called the nucleoid. The nucleoid is not enclosed by a membrane. Prokaryotic cells also contain various other organelles, such as ribosomes, which are used for protein synthesis. They also have a cytoplasm, which is the fluid-filled space inside the cell.

EUKARYOTIC CELLS

- Eukaryotic cells are more complex than prokaryotic cells. They have a nucleus and other membrane-bound organelles.
- Eukaryotic cells are found in all three domains of life: Bacteria, Eukarya, and Eukarya.
- Eukaryotic cells are typically larger than prokaryotic cells, ranging from 10 to 100 micrometers in diameter.
- Eukaryotic cells have a cell wall that provides structural support and protection. The cell wall is made of cellulose in plants and of other materials in animals.
- Eukaryotic cells have a cell membrane that separates the cell from its environment. The cell membrane is a phospholipid bilayer.
- Eukaryotic cells have a nucleus that contains the DNA. The nucleus is enclosed by a nuclear envelope.
- Eukaryotic cells also contain various other organelles, such as mitochondria, which are used for energy production. They also have a cytoplasm, which is the fluid-filled space inside the cell.

CELL THEORY

- All living organisms are made of cells.
- The cell is the basic unit of structure and function in living organisms.
- All cells arise from pre-existing cells.

Cells are the basic units of life. They are the smallest units of an organism that can perform all the functions of life. Cells are found in all living organisms, from the simplest bacteria to the most complex multicellular organisms. Cells are the building blocks of life, and they are the units in which all the processes of life take place.
