Chinese Language Resources Chu-Ren Huang, Shu-Kai Hsieh, Peng Jin, 2023-12-18 Based on the accumulation of research experience and knowledge over the past 30 years this volume lays out the research issues posed by the construction of various types of Chinese language resources how they were resolved and the implication of the solutions for future Chinese language processing research This volume covers 30 years of development in Chinese language processing focusing on the impact of conscientious decisions by some leading research groups It focuses on constructing language resources which led to thriving research and development of expertise in Chinese language technology today Contributions from more than 40 leading scholars from various countries explore how Chinese language resources are used in current pioneering NLP research the future challenges and their implications for computational and theoretical linguistics *Practical Aspects of Declarative Languages* Martin Gebser, Ilya Sergey, 2024-01-09 This book constitutes the refereed proceedings of the 26th International Conference on Practical Aspects of Declarative Languages PADL 2024 held in London UK during January 17 19 2024 The 13 full papers included in this book were carefully reviewed and selected from 25 submissions The accepted papers span a range of topics related to functional and logic programming including reactive programming hardware implementations implementation of marketplaces query languages and applications of declarative programming techniques to artificial intelligence and machine learning **Neuromodulation of Executive Circuits** M. Victoria Puig, Allan T. Gullledge, Evelyn K. Lambe, Guillermo Gonzalez-Burgos, 2016-01-21 High order executive tasks involve the interplay between frontal cortex and other cortical and subcortical brain regions In particular the frontal cortex striatum and thalamus interact via parallel fronto striatal loops that are crucial for the executive control of behavior In all of these brain regions neuromodulatory inputs e g serotonergic dopaminergic cholinergic adrenergic and peptidergic afferents regulate neuronal activity and synaptic transmission to optimize circuit performance for specific cognitive demands Indeed dysregulation of neuromodulatory input to fronto striatal circuits is implicated in a number of neuropsychiatric disorders such as schizophrenia depression and Parkinson s disease However despite decades of intense investigation how neuromodulators influence the activity of fronto striatal circuits to generate the precise activity patterns required for sophisticated cognitive tasks remains unknown In part this reflects the complexity of the cellular microcircuits in these brain regions i e heterogeneity of neuron subtypes and connectivity cell type specific expression patterns for the numerous receptor subtypes mediating neuromodulatory signals and the potential interaction of multiple signaling cascades in individual neurons This Research Topic includes 10 original research articles and seven review articles addressing the role of neuromodulation in executive function at multiple levels of analysis ranging from the activity of single voltage dependent ion channels to computational models of network interactions in cortex striatum thalamus systems *Analytical Chemistry for the Study of Paintings and the Detection of Forgeries* Maria Perla Colombini, Ilaria Degano, Austin Nevin, 2022-09-08 Forgeries present a

daunting problem to art historians museums galleries and curators who face challenges in determining the authenticity of paintings Recent progress in science has led to the development of new methods for investigating works of art and can provide new insights into the materials found in paintings The rise in the value of paintings together with the knowledge and skills of forgers highlights the need to develop reliable scientific procedures to identify fakes Given the complexity of materials in paintings and the convergence of various disciplines a methodological approach for investigations of paintings is based on art historical curatorial aesthetic technical and scientific evaluation In this book sophisticated digital and analytical techniques are reviewed for the identification of materials pigments binders varnishes adhesives and the physical characteristics of paintings such as brushstrokes craquelure and canvas weaves This book presents an updated overview of both non invasive and micro invasive techniques that enable the material characterization of paintings The materials constituting a painting are reviewed as are ways that changes in materials over time can provide insights into chronology and physical history State of the art digital methods including multi and hyper spectral imaging and computational approaches to data treatment will be presented Analytical techniques developed and optimized to characterize binders varnishes and pigments are reviewed focusing on materials which can provide information on ageing or provenance Case studies of applications of synchrotron based methods and the analysis of paintings are given as are chapters devoted to legal aspects related to authenticity Chapter 1 is available open access under a Creative Commons Attribution 4 0 International License via [link springer com](https://link.springer.com)

Innovations, Algorithms, and Applications in Cognitive Informatics and Natural Intelligence Chui, Kwok Tai, Lytras, Miltiadis D., Liu, Ryan Wen, Zhao, Mingbo, 2020-01-03 While cognitive informatics and natural intelligence are receiving greater attention by researchers multidisciplinary approaches still struggle with fundamental problems involving psychology and neurobiological processes of the brain Examining the difficulties of certain approaches using the tools already available is vital for propelling knowledge forward and making further strides Innovations Algorithms and Applications in Cognitive Informatics and Natural Intelligence is a collection of innovative research that examines the enhancement of human cognitive performance using emerging technologies Featuring research on topics such as parallel computing neuroscience and signal processing this book is ideally designed for engineers computer scientists programmers academicians researchers and students

Machine Learning and Data Analytics for Predicting, Managing, and Monitoring Disease Roy, Manikant, Gupta, Lovi Raj, 2021-06-25 Data analytics is proving to be an ally for epidemiologists as they join forces with data scientists to address the scale of crises Analytics examined from many sources can derive insights and be used to study and fight global outbreaks Pandemic analytics is a modern way to combat a problem as old as humanity itself the proliferation of disease Machine Learning and Data Analytics for Predicting Managing and Monitoring Disease explores different types of data and discusses how to prepare data for analysis perform simple statistical analyses create meaningful data visualizations predict future trends from data and more by applying cutting edge technology such as

Emergent neural computation from the interaction of different forms of plasticity Cristina Savin, Matthieu Gilson, Friedemann Zenke, 2016-03-22 From the propagation of neural activity through synapses to the integration of signals in the dendritic arbor and the processes determining action potential generation virtually all aspects of neural processing are plastic This plasticity underlies the remarkable versatility and robustness of cortical circuits it enables the brain to learn regularities in its sensory inputs to remember the past and to recover function after injury While much of the research into learning and memory has focused on forms of Hebbian plasticity at excitatory synapses LTD LTP STDP several other plasticity mechanisms have been characterized experimentally including the plasticity of inhibitory circuits Kullmann 2012 synaptic scaling Turrigiano 2011 and intrinsic plasticity Zhang and Linden 2003 However our current understanding of the computational roles of these plasticity mechanisms remains rudimentary at best While traditionally they are assumed to serve a homeostatic purpose counterbalancing the destabilizing effects of Hebbian learning recent work suggests that they can have a profound impact on circuit function Savin 2010 Vogels 2011 Keck 2012 Hence theoretical investigation into the functional implications of these mechanisms may shed new light on the computational principles at work in neural circuits This Research Topic of Frontiers in Computational Neuroscience aims to bring together recent advances in theoretical modeling of different plasticity mechanisms and of their contributions to circuit function Topics of interest include the computational roles of plasticity of inhibitory circuitry metaplasticity synaptic scaling intrinsic plasticity plasticity within the dendritic arbor and in particular studies on the interplay between homeostatic and Hebbian plasticity and their joint contribution to network function
